PROGRAMMING LANGUAGES

JavaScript & Node.js ★★★★☆
HTML & CSS / Tailwind ★★★★☆
TypeScript ★★★★☆
Python ★★★☆☆
Java ★★★☆☆
PHP ★★☆☆☆
C# ★★☆☆☆
C/C++ ★★☆☆☆

LANGUAGES

German (native)
English (C1)
Norwegian (learning)

OS

Debian, Ubuntu, KDE Neon, Windows

HOBBIES

Reading, statistics, e-guitar, learning languages and the gym

RESUME

I'm a software engineer with a passion for programming. I started my programming journey when I was 13 and never stopped learning since. As such, I have worked in a lot of different areas: low-level programming, mobile & desktop development, server management and game development (I even tried writing my own game engine in C++). I have found myself to always return to web development though, which I have been doing professionally since 2023. I am also a huge Linux fan and have been using it non-stop on servers and desktops for 4 years now (mostly the Debian universe).

What I like most is taking responsibility for how a feature works, from shaping the user flow and making interface decisions to actually implementing it. That is exactly what I am doing with my own products right now: Ordinus (a scheduling platform for teams) and CutSpool (which turns long videos into short clips). Both go from the first sketch of a flow to production React and the Node.js backend behind it. I also care a lot about the small details like transitions, hover states and keyboard navigation (you can see that on arellak.de).

Before that I worked on a credentialing platform for healthcare providers at Netmountains and on several e-commerce projects. In the past I have also developed an API wrapper for the ElevenLabs API before there was an official solution. For the future I am particularly interested in writing software that actually makes a difference, by turning complex problems into software that is easy and straightforward to use.

My non-technical hobbies include playing the e-guitar, learning languages (e.g. Norwegian, but I am generally into linguistics, especially obscure languages like Latin or Middle English), reading (mostly mythology and a bit of philosophy) and going to the gym.

SKILLS / STACKS / TECHNOLOGIES

Frontend
React
Next.js
Tailwind CSS
TanStack
shadcn/ui & Radix
Motion
Electron

Backend
Node.js
Fastify & Express
tRPC
Better Auth
Stripe
Webhooks
Jest & ESLint

Databases
PostgreSQL
Prisma
MySQL / MariaDB
Redis
Elasticsearch
MinIO / object storage

Workflow
Git & GitHub Actions
Docker & Nginx
Vite & Bun
Linear & Jira
PostHog & Umami
Grafana
Tolgee

CV – Marcel Kremer

WORK

2025 – today

Self-employed, kremer-digital · Freelance design & fullstack developer

React, TypeScript, Tailwind CSS, Node.js, Fastify, tRPC, PostgreSQL, WordPress

- Design and build websites and web apps for smaller companies in the Ruhr area, from requirements to launch. For example Westencut GmbH: a one-page showcase with a Strapi CMS and a React Router front end, each in its own Docker container.
- **Ordinus** (ordinus.io): scheduling for teams. Visitors answer a routing form before they book and rules decide which person or pool gets the appointment. Designed and built the React app and the Fastify/tRPC API, including Stripe payments, Google and Microsoft calendar sync and SAML single sign-on.
- **CutSpool** (cutspool.com): turns podcasts, interviews and webinars into 9:16 clips. It transcribes with word-level timings, picks the moments worth cutting and adds optional captions.
- **nachweisfertig** (nachweisfertig.de): EU AI Act paperwork for small businesses. Each AI tool gets a traffic-light rating with a plain-language explanation and the app produces the required documents as a PDF.
- **kremer-digital.de**: studio website with a self-built admin area, where blog posts and the glossary are written in a Tiptap editor.

2024

Netmountains Group GmbH · Fullstack Developer

Node.js, React, Redux, Tailwind CSS

- Developed a credentialing and certification platform for healthcare providers applying for reimbursement eligibility with statutory health insurers.

2023 – 2024

Backwinkel GmbH · Fullstack Developer, e-commerce

PHP, OXID eShop, Twig, Java, Elasticsearch

- Developed and maintained an online shop for school supplies, improving its security and performance.

2023

Eshop Guide GmbH · Fullstack Web Developer

Shopify, React, SCSS, Node.js

- Built and customized Shopify stores for German companies and integrated Shopify apps.

EDUCATION

2023 – paused

Computer Science · AKAD University of Applied Sciences (distance learning)

2020 – 2022

Technical diploma · Vocational school, HBU Unna
